

## THE MARVIN GROUP (2005)

The Marvin Engineering Co, a manufacturer of mechanical assemblies, built their three story headquarters in Inglewood in 2005. Nadel Architects designed The Marvin Group's 135,000 square foot headquarters building as the hub in a larger campus. With a \$15 million construction budget they incorporated company research and development laboratories, high-tech manufacturing, corporate offices, teleconferencing, and subterranean parking onto one site.

Nadel's design reflects the Marvin Group's varied businesses, showcasing the intersection of machine and design. Industrial exterior finishes including site-cast concrete in diverse textures, and three types of custom corrugated metal siding reinforce the concept of industrial manufacture and assembly.

Inglewood is a natural location for these industries, as it is central to the regional defense and aerospace industrial corridor, including Los Angeles, El Segundo and Torrance.

### Architect

#### Nadel Architects

Herb Nadel began practicing architecture in 1960 after attending the University of Southern California School of Architecture. He founded the firm in 1973. Since then Nadel Architects has expanded into an international design firm with a portfolio of projects encompassing the United States, China, Southeast Asia, Middle East, Europe, South America and Africa. The firm has designed more than 400 office buildings, 60,000 residential units in multi-family and mixed-use developments, and over 75 million square feet of retail space, along with innumerable hotels and resorts, educational facilities, industrial, medical and specialty projects.
